

Foundations of Mathematical Economics

Michael Carter

Detailed Contents

1 Sets and Spaces

- 1.1 Sets
- 1.2 Ordered sets
 - 1.2.1 Relations
 - 1.2.2 Equivalence relations and partitions
 - 1.2.3 Order relations
 - 1.2.4 Partially ordered sets and lattices
 - 1.2.5 Weakly ordered sets
 - 1.2.6 Aggregation and the Pareto order
- 1.3 Metric spaces
 - 1.3.1 Open and closed sets
 - 1.3.2 Convergence: completeness and compactness
- 1.4 Linear spaces
 - 1.4.1 Subspaces
 - 1.4.2 Basis and dimension
 - 1.4.3 Affine sets
 - 1.4.4 Convex sets
 - 1.4.5 Convex cones
 - 1.4.6 Sperner's lemma
 - 1.4.7 Conclusion
- 1.5 Normed linear spaces
 - 1.5.1 Convexity in normed linear spaces
- 1.6 Preference relations
 - 1.6.1 Monotonicity and nonsatiation
 - 1.6.2 Continuity
 - 1.6.3 Convexity
 - 1.6.4 Interactions
- 1.7 Conclusion
- 1.8 Notes

2 Functions

- 2.1 Functions as mappings
 - 2.1.1 The vocabulary of functions
 - 2.1.2 Examples of functions
 - 2.1.3 Decomposing functions
 - 2.1.4 Illustrating functions
 - 2.1.5 Correspondences
 - 2.1.6 Classes of functions
- 2.2 Monotone functions
 - 2.2.1 Monotone correspondences
 - 2.2.2 Supermodular functions
 - 2.2.3 The monotone maximum theorem
- 2.3 Continuous functions
 - 2.3.1 Continuous functionals

- 2.3.2 Semicontinuity
- 2.3.3 Uniform continuity
- 2.3.4 Continuity of correspondences
- 2.3.5 The continuous maximum theorem
- 2.4 Fixed point theorems
 - 2.4.1 Intuition
 - 2.4.2 Tarski fixed point theorem
 - 2.4.3 Banach fixed point theorem
 - 2.4.4 Brouwer fixed point theorem
 - 2.4.5 Concluding remarks
- 2.5 Notes

3 Linear Functions

- 3.1 Properties of linear functions
 - 3.1.1 Continuity of linear functions
- 3.2 Affine functions
- 3.3 Linear functionals
 - 3.3.1 The dual space
 - 3.3.2 Hyperplanes
- 3.4 Bilinear functions
 - 3.4.1 Inner products
- 3.5 Linear operators
 - 3.5.1 The determinant
 - 3.5.2 Eigenvalues and eigenvectors
 - 3.5.3 Quadratic forms
- 3.6 Systems of linear equations and inequalities
 - 3.6.1 Equations
 - 3.6.2 Inequalities
 - 3.6.3 Input-output models
 - 3.6.4 Markov chains
- 3.7 Convex functions
 - 3.7.1 Properties of convex functions
 - 3.7.2 Quasiconcave functions
 - 3.7.3 Convex maximum theorems
 - 3.7.4 Minimax theorems
- 3.8 Homogeneous functions
 - 3.8.1 Homothetic functions
- 3.9 Separation theorems
 - 3.9.1 Hahn-Banach theorem
 - 3.9.2 Duality
 - 3.9.3 Theorems of the alternative
 - 3.9.4 Further applications
 - 3.9.5 Concluding remarks
- 3.10 Notes

4 Smooth Functions

- 4.1 Linear approximation and the derivative
- 4.2 Partial derivatives and the Jacobian
- 4.3 Properties of differentiable functions
 - 4.3.1 Basic properties and the derivatives of elementary functions
 - 4.3.2 Mean value theorem
- 4.4 Polynomial approximation
 - 4.4.1 Higher-order derivatives
 - 4.4.2 Second-order partial derivatives and the Hessian
 - 4.4.3 Taylor's theorem
- 4.5 Systems of nonlinear equations
 - 4.5.1 The inverse function theorem
 - 4.5.2 The implicit function theorem
- 4.6 Convex and homogeneous functions
 - 4.6.1 Convex functions
 - 4.6.2 Homogeneous functions
- 4.7 Notes

5 Optimization

- 5.1 Introduction
- 5.2 Unconstrained optimization
- 5.3 Equality constraints
 - 5.3.1 The perturbation approach
 - 5.3.2 The geometric approach
 - 5.3.3 The implicit function theorem approach
 - 5.3.4 The Lagrangean
 - 5.3.5 Shadow prices and the value function
 - 5.3.6 The net benefit approach
 - 5.3.7 Summary
- 5.4 Inequality constraints
 - 5.4.1 Necessary conditions
 - 5.4.2 Constraint qualification
 - 5.4.3 Sufficient conditions
 - 5.4.4 Linear programming
 - 5.4.5 Concave programming
- 5.5 Notes

6 Comparative statics

- 6.1 The envelope theorem
- 6.2 Optimization models
 - 6.2.1 Revealed preference approach
 - 6.2.2 Value function approach
 - 6.2.3 The monotonicity approach
- 6.3 Equilibrium models
- 6.4 Conclusion
- 6.5 Notes
